

**Postdoctoral Position in Metabolic Engineering of Cyanobacteria
Jamey Young's Lab at Vanderbilt University**

A postdoctoral position is available immediately to develop and test novel strategies for engineering cyanobacteria for production of lipid-derived fuels and chemicals. ¹³C metabolic flux analysis, metabolomics profiling, algal cell culture, biochemical assays, and molecular biology studies will be key approaches used in the research. Motivation and experience will be important factors in the recruitment process. For more information about the Young laboratory, see our website: <http://www.vanderbilt.edu/younglab>. Interested applicants should send a current CV including the names of three references to: Dr. Jamey Young at: j.d.young@vanderbilt.edu.
